I give permission for the processing of my personal data as stated in the Clarification Text provided on the Faculty of Engineering website.

1. Wild West produces two types of cowboy hats. A type 1 hat requires three times as much labor time as type 2. If the all available labor time is dedicated to Type 2 alone, The company can produce a total of 450 Type 2 hats a day. The market limits for the two types are 100 and 300 hats per day for Type 1 and Type 2, respectively. The profit is $8 per Type 1 hat and $5 per Type 2 hat. Determine the number of hats of each type that would maximize profit.

i. Build the mathematical model of the problem.

ii. Solve the problem graphically.

Emir Ege Eren 150119739 Emir

x_1 = number of type 1 hats

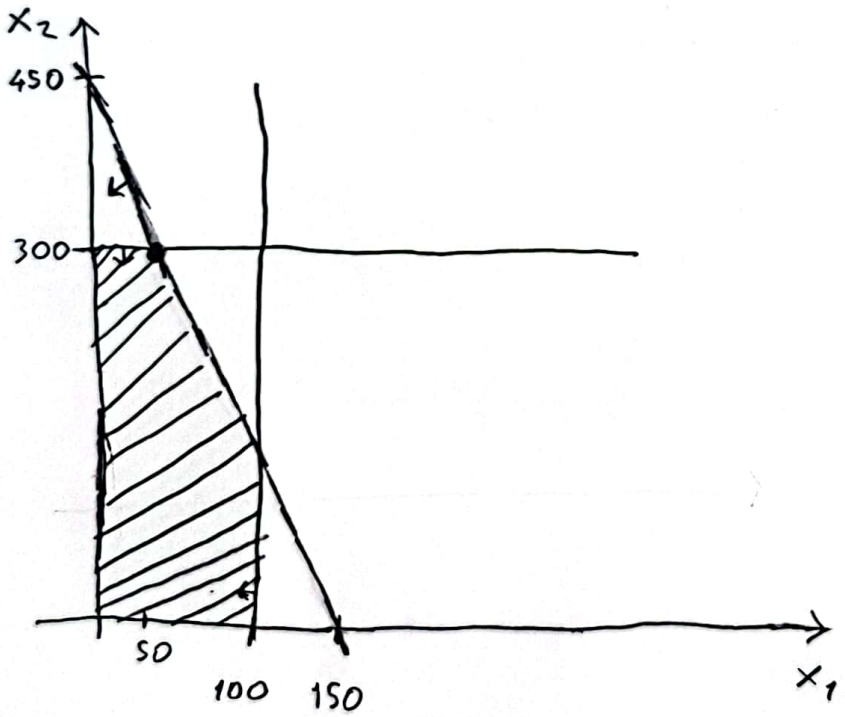
x_2 = number of type 2 hats

maximize = $8x_1 + 5x_2$

$3x_1 + x_2 \leq 450$

$x_1 \leq 100$

$x_2 \leq 300$



$x_1 = 50 \quad x_2 = 300$

$8 \cdot 50 + 5 \cdot 300 = 400 + 1500 = 1900$
